

Assembly instructions for the JTOD2458-57 Antenna

The antenna comes with a U-bolt mount with wingnuts for easy assembly. Attach the mounting plate to the bottom of the antenna and tighten the mounting plate nut. Insert the clamp onto the U-bolt with the teeth towards the "U" and then insert the U-bolt through the holes on the antenna mounting plate. Install the washers and wingnuts.

There are two screw holes at the base of the antenna just above the mounting plate. One is sealed and the other is open. This hole is provided for an optional antenna mount and is not used. You may seal this hole with the included hex bolt or silicon sealant if you wish.
